Total: **10 questions**
Source: practiceaptitudetests.com

Question 1 of 10

A Thornleigh Air aircraft is scheduled to fly three sectors to Jervaulx on Tuesday, each lasting 2 h 45 min. What is the total flying time in hours?

A 7.35 hours

B 8.25 hours

C 9.00 hours

D 12.25 hours

✓ Đáp án: **Answer: B. 8.25 hours**

Giải thích: Turn the sector length into decimal hours first, then multiply.
45 minutes is 45 divided by 60 = 0.75 hours, so each sector is 2.75 hours.
3 x 2.75 = 8.25 hours.
A common error here is writing 2 h 45 min as 2.45 hours, which gives 7.35 hours. Minutes run to 60, not to 100, so 45 minutes is three quarters of an hour.

Question 2 of 10

Reading Passage / Scenario:
Skelwith Group declared a final dividend of 7.4 pence a share, taking the total for the year to 11.2 pence. The results say the dividend is covered twice by earnings and that the board intends to keep cover at about that level. They give free cash flow of £74 million and note that the group bought back no shares during the year. Skelwith has paid a final dividend in each of the last twelve years.

Based only on the information in the passage, is the following statement True, False, or Cannot say?
Statement: "The group's final dividend is 7.4 pence a share."

A True

B False

C Cannot say

✓ Đáp án: **Answer: A. True**

Giải thích: The statement is True. The passage says Skelwith "declared a final dividend of 7.4 pence a share", which is the statement.
The rule: where the passage states the claim, the answer is True. The most tempting wrong answer is False, from reading the 11.2 pence total for the year as the final dividend.

Question 3 of 10

Four meetings are held from Monday to Thursday, one per day.
The budget meeting is before the hiring meeting.
The safety meeting is on Wednesday.
Which statement must be true?

A The hiring meeting is on Thursday.

B The budget meeting is on Monday.

C The training meeting is after the safety meeting.

D The budget meeting is not on Thursday.

✓ Đáp án: **Answer: D. The budget meeting is not on Thursday.**

Giải thích: The safety meeting takes Wednesday, leaving Monday, Tuesday and Thursday for the other three. Rule 1 puts the hiring meeting after the budget meeting, so the budget meeting cannot take the last day of the week. Nothing else is settled. The budget and hiring meetings take Monday and Tuesday, Monday and Thursday, or Tuesday and Thursday, with training taking whichever day is left, so the hiring meeting on Thursday, the budget meeting on Monday and training after safety each hold in some of those weeks and fail in others. The most tempting trap is the hiring meeting on Thursday, because Thursday is the obvious home for the later of a pair. Tuesday works too.

Question 4 of 10

Route	Turnarounds	Total ground time (minutes)
Ilkeston to Jervaulx	20	900
Ilkeston to Longmoor	150	9,750
Ilkeston to Newbold	30	1,110
Jervaulx to Longmoor	50	1,600

The table shows Thornleigh Air's turnarounds last month. Taking every turnaround at Ilkeston as a single group, what was the mean ground time per turnaround?

A 45.0 minutes

B 49.0 minutes

C 53.4 minutes

D 58.8 minutes

✓ Đáp án: **Answer: D. 58.8 minutes**

Giải thích: Keep only the routes that start at Ilkeston, pool both columns, then divide once.
Turnarounds: 20 + 150 + 30 = 200.
Ground time: 900 + 9,750 + 1,110 = 11,760 minutes.
11,760 divided by 200 = 58.8 minutes.
A common error here is averaging the three routes' own figures, which gives 49.0 minutes.
The Longmoor route carries three quarters of the turnarounds and the slowest ground time,
so an unweighted average sits well below the true figure.

Question 5 of 10

Reading Passage / Scenario:
Cooper's Field is a development of eighteen houses on the site of a former dairy. Plot 14 has a garden of 210 square metres, and plot 15, on the corner, has a garden of 260 square metres. Plot 14 is the larger house, with four bedrooms against plot 15's three. Gardens are turfed and fenced before completion, with a paved path to the rear gate. Both plots face the retained oak at the centre of the development, and both carry the same estate management charge for the shared landscaping.

Based only on the information in the passage, is the following statement True, False, or Cannot say?
Statement: "Plot 14 at Cooper's Field has a larger garden than plot 15."

A True

B False

C Cannot say

✓ Đáp án: **Answer: B. False**

Giải thích: The statement is False. The passage says "plot 14 has a garden of 210 square metres, and plot 15, on the corner, has a garden of 260 square metres". On the stated garden areas plot 14's is smaller, so the claim is contradicted.
The rule: comparing two stated figures on the same measure settles the claim either way. The most tempting wrong answer is True, from carrying the house-size comparison onto the gardens.

Question 6 of 10

You are a purchase ledger clerk. Two hundred invoices must be coded before the ledger closes at 6pm and you are ninety behind at 5pm. The coding sheet requires each invoice to be marked as checked against its purchase order. Nobody reviews the sheet. Which response below would be most effective, and which would be least effective?

A Tell your manager at 5pm that ninety will not be coded properly by 6pm, and ask whether to hold the close or code them without the purchase order check.

B Code as many as you properly can by 6pm and leave the rest for tomorrow, without telling anybody that the ledger has closed with invoices outstanding.

C Stay until eight to code all ninety properly, and say nothing about how close the deadline came to being missed this month.

D Code the ninety quickly and mark them all as checked against their purchase orders, since the coding itself is right and nobody ever reviews the sheet afterwards.

✓ Đáp án: **Most effective: A. Tell your manager at 5pm that ninety will not be coded properly by 6pm, and ask whether to hold the close or code them without the purchase order check. | Least effective: D. Code the ninety quickly and mark them all as checked against their purchase orders, since the coding itself is right and nobody ever reviews the sheet afterwards.**

Giải thích: B: Lets a close happen incomplete in silence: whoever relies on the closed ledger has no idea part of it is missing.

C: Absorbs the shortfall: the ledger closes right and nobody learns that two hundred invoices does not fit in the day.

D: Marks ninety invoices as checked when they were not: the sheet is the only evidence the check happened, and everybody downstream reads it as meaning exactly that.

The most effective response is to tell your manager at 5pm that ninety will not be coded properly by 6pm, and ask whether to hold the close or code them without the purchase order check: an hour before the close she can still choose, and only she can make that trade. It beats coding as many as you properly can and leaving the rest without telling anybody the ledger closed with invoices outstanding, because an incomplete close nobody knows about is the worst version of it. It beats staying until eight to code all ninety properly and saying nothing, because three hours of your own time hides a capacity problem. The least effective response is coding the ninety quickly and marking them all as checked against their purchase orders: ninety invoices are recorded as checked against documents nobody opened. That is falsifying the record rather than under-delivering or absorbing it. The principle: the sheet says what you did, and a deadline is not a reason to change that.

Question 7 of 10

Row	Master	Entered
1	LS25 4GH	LS25 4GH
2	CV34 6RP	CV34 6RP
3	PE21 9WD	PE21 9WD
4	TS18 3LQ	TS188 3LQ

Which row was copied incorrectly?

A Row 1

B Row 2

C Row 3

D Row 4

✓ Đáp án: **Answer: D. Row 4**

Giải thích: Row 4 reads TS18 in the master list but TS188 in the entry: the 8 has been typed twice. The doubled digit sits immediately before the space, so the second half of the postcode still lines up and reads correctly, which is what makes the extra character easy to pass over.

Question 8 of 10

Five hearings are held one after another.
Fowey is heard first.
Dunkeld is heard immediately after Corfe.
Brackley is heard after Dunkeld.
Ewhurst is heard before Corfe.
Which hearing is third?

A Brackley

B Corfe

C Dunkeld

D Ewhurst

✓ Đáp án: **Answer: B. Corfe**

Giải thích: Fowey takes first place, leaving positions 2 to 5. Rule 2 ties Dunkeld directly behind Corfe, rule 4 puts Ewhurst in front of Corfe and rule 3 puts Brackley behind Dunkeld, so the order is Fowey, Ewhurst, Corfe, Dunkeld, Brackley. Corfe is third. Eliminate the rest: Ewhurst is second, Dunkeld is directly behind Corfe so it is fourth, and Brackley is at the end of the chain. The most tempting trap is Dunkeld, which is where the pair lands if rule 2 is read the other way round.

Question 9 of 10

You are a check-in agent. A colleague applying for a role in another department asks you to write a short statement about how she handles difficult passengers. She is competent but that is the part of the job she finds hardest, and the statement she has drafted for you describes her as outstanding at it. She asks you to sign it as it stands. Which response below would be most effective, and which would be least effective?

A Tell her you cannot sign her draft as it stands, and offer to write something yourself covering what you can honestly say about her work.

B Decline to sign it and leave it there, since a statement about somebody else's work is not something you should be drawn into either way.

C Sign the draft as she has written it, since statements of this kind are always generous, everybody knows that, and it costs nothing to help a colleague.

D Sign it with the wording softened enough that it is not quite untrue, so that she gets her statement without you saying anything you would have to defend.

✓ Đáp án: **Most effective: A. Tell her you cannot sign her draft as it stands, and offer to write something yourself covering what you can honestly say about her work. | Least effective: C. Sign the draft as she has written it, since statements of this kind are always generous, everybody knows that, and it costs nothing to help a colleague.**

Giải thích: B: Refuses without offering the alternative: she has real strengths you could describe, and a flat no leaves her with nothing and no idea why.

C: Puts your name to a description you know to be wrong: whoever reads it relies on it precisely because it comes from somebody who has worked beside her.

D: Writes to be defensible rather than accurate: the reader still takes it as a recommendation of the part she is weakest at, and the care has gone into wording rather than truth.

The most effective response is to tell her you cannot sign her draft as it stands, and offer to write something yourself covering what you can honestly say: the draft says something you do not believe, and writing your own gives her a genuine statement from somebody who has seen her work. It beats declining to sign and leaving it there, because she has real strengths and a refusal with nothing after it helps neither of you. It beats signing it with the wording softened enough not to be quite untrue, because carefully worded ambiguity still leaves the reader believing what the draft claims. The least effective response is signing the draft as she has written it because statements of this kind are always generous: it endorses a description of a colleague you know to be wrong, for a reader relying on your having worked beside her. That is worse than the other two, which stop short of endorsing the claim outright. The

principle: write what you can honestly say and offer that, rather than signing somebody else's version or hiding behind wording.

Question 10 of 10

Row	Original	Keyed
1	WHS-52836-DL	WHS-52836-DL
2	WHS-52683-DL	WHS-52863-DL
3	WHS-52368-DL	WHS-52368-DL
4	WHS-52638-DL	WHS-52638-DL

Which row was copied incorrectly?

A Row 1

B Row 2

C Row 3

D Row 4

✓ Đáp án: **Answer: B. Row 2**

Giải thích: Row 2 reads WHS-52683 in the original but WHS-52863 in the keyed version: the 6 and the 8 have swapped places. All four references open WHS-52 and close DL, and the three digits in between are orderings of 3, 6 and 8, so no reference can be recognised by its shape or by the digits it holds. Only their order separates them, and the keyed value for row 2 is an ordering that appears nowhere in the original column.

GENERAL & PSYCHOMETRIC TESTS

Practice Psychometric Tests

Total: **10 questions**
Source: practiceaptitudetests.com

Question 1 of 10

Reading Passage / Scenario:
Ferry Meadow Forge bends and welds railings, balconies and stair strings for builders along the estuary. Railings are powder-coated in the forge's own shop, a converted grain barn beside the workshop where the coated work cures overnight. Galvanising, when a job calls for it, goes by trailer to the works upriver before coating. The forge's price list hangs by the door, dated in chalk. Site fixing is quoted separately, with the fixings themselves made in the forge.

Based only on the information in the passage, is the following statement True, False, or Cannot say?
Statement: "Ferry Meadow Forge powder-coats its railings in its own shop."

A True

B False

C Cannot say

✓ **Đáp án: Answer: A. True**

Giải thích: The statement is True. The passage says "railings are powder-coated in the forge's own shop", and the statement repeats that fact in the same terms.
The rule: a claim the passage states outright is True. The most tempting wrong answer is False, from carrying the galvanising trips across to the coating.

Question 2 of 10

You are an accounts assistant. A department head asked for a breakdown of his costs by project. The system can only split them by cost centre, which is close but not the same, and he will notice. Producing it takes two hours. He needs it on Thursday. Which response below would be most effective, and which would be least effective?

A Tell him today that the split is by cost centre rather than by project, explain the difference, and ask whether that is still worth two hours of work.

B Spend the two hours mapping cost centres to projects by hand so he gets exactly what he asked for, without checking whether the approximation would have done.

C Produce the cost centre breakdown and send it on Thursday without saying that it is not the project split he asked for, since the two are close enough for most purposes anyway.

D Reply that the system cannot produce a breakdown by project at all and simply leave it there, so that he can decide for himself what he wants to do about it from his end.

✓ Đáp án: **Most effective: A. Tell him today that the split is by cost centre rather than by project, explain the difference, and ask whether that is still worth two hours of work. | Least effective: C. Produce the cost centre breakdown and send it on Thursday without saying that it is not the project split he asked for, since the two are close enough for most purposes anyway.**

Giải thích: B: Buys precision nobody asked the price of: a hand mapping may be unnecessary and it is the slowest route to Thursday.

C: Withholds the one difference that matters: he asked for projects, receives cost centres, and nothing on the page tells him they are not the same thing.

D: Reports the obstacle and stops: the cost centre split is close and may well serve, and he cannot judge that without being offered it.

The most effective response is to tell him today that the split is by cost centre rather than by project, explain the difference, and ask whether that is still worth two hours: he learns what is actually available, understands the gap, and decides whether the work is worth doing. It beats replying that the system cannot produce a breakdown by project at all, because a flat no withholds something that probably serves. It beats spending the two hours mapping cost centres to projects by hand, because nobody has established that the approximation would not do. The least effective response is producing the cost centre breakdown and sending it without saying it is not the project split he asked for: he uses cost centres believing they are projects. That is silence about the difference rather than an unhelpful or over-thorough answer. The principle: when what you can give is not what was asked for, say so before you build it.

Question 3 of 10

Station	Sectors	Passengers	Charge (£)
Quenby	480	62,400	122,400
Scarcliffe	90	12,150	31,050
Vernham	130	18,850	40,300

The table shows Rowsley Handling's charges last month. Next month Ryedale Airways expects 540 sectors at Quenby. At Quenby's cost per sector last month, what will the Quenby charge be?

A £122,400

B £137,700

C £163,800

D £186,300

✓ Đáp án: **Answer: B. £137,700**

Giải thích: Build Quenby's own rate, then scale it to next month's sectors.
122,400 divided by 480 = £255 per sector.
255 x 540 = £137,700.
A common error here is averaging the three stations' rates, which gives £163,800 and answers a question about the network rather than about Quenby. The passengers column is not needed: the charge is asked per sector, not per passenger.

Question 4 of 10

Reading Passage / Scenario:
Nettleton and Chalcombe's management board is made up of the managing partner, the finance director, and the head of each of the firm's three largest departments. The firm's five departments are property, private client, commercial, employment and litigation. Property is the largest of the five by headcount and by income, and has been for six years. The board meets monthly at the main office. Its papers go to all partners a week beforehand.

Based only on the information in the passage, is the following statement True, False, or Cannot say?
Statement: "The head of the property department is a member of the management board."

A True

B False

C Cannot say

✓ Đáp án: **Answer: A. True**

Giải thích: The statement is True. The board includes "the head of each of the firm's three largest departments", and property "is the largest of the five by headcount and by income". The largest department is one of the three largest.
The rule: where the passage states that every member of a group has a property and states that a named thing belongs to that group, the property follows with certainty. The most tempting wrong judgement is Cannot say, because the passage ranks only one department, and a reader who wants the full ordering will feel short of information they do not actually need.

Question 5 of 10

You are a compliance assistant. A fee earner asks you to confirm that a client's source of funds check was completed before a transfer goes this afternoon. The system shows the check requested and not returned, and the provider is usually a day. Which response below would be most effective, and which would be least effective?

A Tell him the check is not back and that the transfer will have to wait until it is, since that is what the rule requires and there is nothing else to be said.

B Tell him the check is requested and not returned, and that you will chase the provider now and come back to him before the transfer window closes.

C Tell him it is requested and suggest he goes ahead on the basis that the check will land later today, so the transfer is not held up by paperwork.

D Tell him the check is complete and guarantee it, since checks of this kind almost always come back clear and the provider has never raised anything on this client.

✓ Đáp án: **Most effective: B. Tell him the check is requested and not returned, and that you will chase the provider now and come back to him before the transfer window closes. | Least effective: D. Tell him the check is complete and guarantee it, since checks of this kind almost always come back clear and the provider has never raised anything on this client.**

Giải thích: A: Answers with the rule and stops: it is right about the position and it accepts a delay before anybody has chased the provider, who may well answer within the hour.

C: Advises acting ahead of the check: the timing of the result is not the point, and a transfer made before a source of funds check is exactly the sequence the rule forbids.

D: States a result that has not arrived: a transfer will go this afternoon on the strength of a check nobody has seen, which is the one thing the check exists to prevent.

The most effective response is to tell him the check is requested and not returned, and that you will chase the provider now and come back before the transfer window closes. He needs the true position and the check needs chasing, and doing both means the transfer either goes properly or waits for a reason. It beats telling him the transfer must wait until the check is back and saying nothing else, because nobody has chased. It beats suggesting he goes ahead on the basis that the check will land later today, because the order of check and transfer is the whole point. The least effective response is telling him the check is complete and guaranteeing it: a result that has not come back is reported, and a transfer goes on it. That is a different kind of wrong from the other two, both of which are honest about the check's status. The principle: say exactly where the check is, and go and move it.

Question 6 of 10

Row	Source	Transcribed
1	TRF-2840-EC	TRF-2840-EC
2	TRF-5163-EC	TRF-5163-EC
3	TRF-9472-EC	TRF-9472-EC
4	TRF-6395-EC	TRF-6395-Ec

Which row was copied incorrectly?

A Row 1

B Row 2

C Row 3

D Row 4

✓ Đáp án: **Answer: D. Row 4**

Giải thích: Row 4 ends EC in the source but Ec in the transcription: the final letter has been dropped to lowercase. Every code opens and closes with the same blocks, so the digits in the middle are what the eye works on, and the case slip sits outside them.

Question 7 of 10

Five service tickets are closed one after another.
Holt is closed last.
Eames is closed immediately after Dodd.
Fenn is closed before Dodd.
Garvey is closed after Eames.
Which ticket is closed second?

A Dodd

B Eames

C Fenn

D Garvey

✓ Đáp án: **Answer: A. Dodd**

Giải thích: Holt takes place 5. Rules 2, 3 and 4 chain the other four into Fenn, then Dodd, then Eames, then Garvey, so the order is Fenn, Dodd, Eames, Garvey, Holt. Dodd is closed second. Eliminate the rest: Fenn is at the head of the chain so it is first, Eames sits directly behind Dodd so it is third, and Garvey sits behind Eames so it is fourth. The most tempting trap is Eames, which is where the Dodd and Eames pair lands if rule 2 is read the other way round.

Question 8 of 10

Component	Units used last year	Units used this year
Wheels	940	1,015
Brake units	620	806
Hydraulic units	380	469
Filters	1,240	1,190

The table shows spares used at Marsden Air's Osgathorpe store. By what percentage did the combined use of brake units and hydraulic units change?

A 21.6%

B 23.4%

C 27.5%

D 30.0%

✓ Đáp án: **Answer: C. 27.5%**

Giải thích: Build one subtotal per year before comparing, and ignore the wheels and filters rows.
Last year: 620 + 380 = 1,000 units.
This year: 806 + 469 = 1,275 units.
Change: 275 divided by 1,000 x 100 = 27.5%.
A common error here is dividing by this year's total rather than last year's, which gives 21.6%. Reading one component alone gives 30.0% for brake units or 23.4% for hydraulic units, and neither is the combined figure.

Question 9 of 10

Batch code:
ZT-6394-KM-72
Which option exactly matches the batch code?

A ZT-6394-MK-72

B ZT-6394 KM-72

C ZT-6394-KM-72

D Zt-6394-KM-72

✓ Đáp án: **Answer: C. ZT-6394-KM-72**

Giải thích: Only option c reads ZT-6394-KM-72 exactly. The three deviations sit in three different places: option a swaps the letters of the third block, option b replaces the second hyphen with a space, and option d drops the second letter to lowercase. Every option is thirteen characters and every one carries the same digits, so all four blocks have to be checked in turn.

Question 10 of 10

Four handovers run from Monday to Friday, one per day. Wednesday is left free.
The handovers are Peebles, Roslin, Selkirk and Traquair.
Traquair is on the calendar day immediately after Selkirk.
Peebles is not on Tuesday.
Which statement must be true?

A Peebles is on Monday or on Friday.

B Selkirk is on Monday or on Thursday.

C Roslin is on Tuesday.

D Peebles is earlier in the week than Roslin.

✓ Đáp án: **Answer: B. Selkirk is on Monday or on Thursday.**

Giải thích: Wednesday is free, so the handovers use Monday, Tuesday, Thursday and Friday. Rule 1 needs Selkirk and Traquair on consecutive days, and the only consecutive pairs left are Monday with Tuesday and Thursday with Friday. Selkirk takes the earlier day of whichever pair is used, so Selkirk is on Monday or on Thursday. Everything else stays open. With the pair on Monday and Tuesday, Peebles and Roslin split Thursday and Friday either way; with the pair on Thursday and Friday, rule 2 keeps Peebles off Tuesday, so Peebles takes Monday and Roslin Tuesday. That is three permitted weeks, and Peebles on Monday or on Friday, Roslin on Tuesday, and Peebles earlier in the week than Roslin each fail in at least one. The move that matters is that a free Wednesday breaks the week into two blocks of two.
